

## INFORMAL REQUEST FOR PROPOSAL No. DL160644IRFP

### Antique Globe Restoration IRFP

July 27, 2012

Oregon State University (OSU) Procurement and Contract Services (PaCS) is seeking Responsive Responsible Proposers to provide restoration and repair services for the 1927 Terrestrial Globe, W. and A.K. Johnston, located in the OSU Memorial Union Building. The sphere of the globe measures 30 in. in diameter with a surface area of ~ 20 ft.<sup>2</sup>. It is formed from two hemispheres of papier-mâché with a shell of plaster with a central post and is secured within an engraved and gilded brass meridian ring measuring 1 3/8 x 1/4 in. which rides on a brass roller on a pillar at the base of the stand. There are 3 1/2 in. diam. hour rings at both poles. The meridian ring is positioned within brass lined notches in the 3 3/4 in. wide horizon ring which is positioned at a height of 31 7/8 in. on four fluted legs which are joined at the base of the stand. The finish is clear.

Interested vendors may respond in Writing and in accordance with the instructions in this Informal Request for Proposal (IRFP) no later than August 13, 2012, 2 PM (Proposal Due Date and Time). OSU is an AA/EEO employer and encourages the submittal of responses from women, minority-owned and emerging small business enterprises.

If you have any questions regarding this IRFP, please contact me at the telephone or e-mail address indicated below.

## **1.0 BACKGROUND**

### 1.01 OREGON STATE UNIVERSITY:

Founded in 1868, Oregon State University is a comprehensive, research-extensive, public university located in Corvallis. OSU is a member of the Oregon University System and one of only two American universities to hold the Land Grant, Sea Grant, Space Grant and Sun Grant designations. OSU is also the only Oregon institution to hold the Carnegie Foundation's top ranking for research universities, a recognition of the depth and quality of OSU's graduate education and research programs.

Through its centers, institutes, Extension offices and Experiment Stations, OSU has a presence in almost every one of Oregon's 36 counties, including its main campus in Corvallis, the Hatfield Marine Sciences Center in Newport and OSU-Cascades Campus in Bend. OSU offers undergraduate, master's and doctoral degrees through 12 academic colleges enrolling more than 20,000 students from every county in Oregon, every state in the country and more than 90 nations.

### 1.02 BACKGROUND:

Over the many years that this asset has been held at the Memorial Union Building, a wide variety of damage and aging has occurred. The structure of the sphere is generally sound with the exception of one large and two smaller divots in the surface along with several smaller surface losses and smaller networks of shallow cracks seen at areas of paper loss. No cracks, planar distortion or faceting are associated with the seam locations.

The paper is very thin and fragile. There are approximately ten large losses, many of which are the full width of the gore, and fifteen smaller edge losses (totaling ~ 95 in.<sup>2</sup>). There several tears with others that were mended in an earlier campaign of repair. The surface of the paper exhibits marked abrasion from handling or contact with either the horizon ring or the meridian ring. (Much of this damage was caused by the sphere sitting too low in the meridian ring and becoming free of the top meridian ring clamp.). This abrasion can be of the printed design alone or through the design to the paper or plaster. It is most noticeable in northern Europe and Russia, western North America, the north Pacific, in a band around the equator and for the lower 30° in the southern hemisphere. Most of one label is missing. There is evidence of staining from liquids in the form of drips, tidemarks, and streaks. The design media is similarly thin and fragile; it suffers from exposure and appears dull, yellowed and faded in the northern hemisphere (there is also unevenness of printed color between gores in the oceans which lends them something of a checkered appearance). The varnish is also largely worn away in the northern hemisphere but appears more intact although discolored yellow in the southern. Surface grime is marked and entrenched causing diminished contrast of the design against the background. The paper on the horizon ring is comparable in condition with losses at October, abrasion at the edge from June – March, staining, fading of the design media, loss of the varnish and entrenched grime.

The metal components are intact but the meridian ring suffers from abrasion of the gilding and all elements exhibit discoloration of the finish, corrosion where exposed and soiling. As noted above, the sphere sits too low in the meridian ring and can easily become free of the top meridian ring clamp (brass washers were added temporarily at the bottom for safe handling). The stand is generally secure but some joints are loose, the finish appears desiccated and soiled, and the feet exhibit abrasion.

In summary, the globe is most compromised in condition and appearance by the fragility of the paper and, in particular the inherent thin quality of chromolithographic printing. In addition the sphere has several large divots, the paper losses exhibits large losses, the printing media is faded and abraded, the varnish is worn and uneven, and surface grime is marked and entrenched. To the best of our knowledge, no prior restoration work has been performed on this asset.

## **2.0 STATEMENT OF WORK/SAMPLE CONTRACT**

### 2.01 STATEMENT OF WORK:

The priorities of treatment are to complete the globe by replacing the areas of loss in the paper, remove the distracting compromises in condition such as the divots, complete the design where the media is lost through

photo duplication or fill in the background colors without the cartographic delineations to lend those areas an appearance of completeness, reduce the discolored varnish and surface grime to enhance the contrast of the design against the background to improve the legibility and contribute to an appearance of consistency between the two hemispheres. With the general fragility of the printing media and the entrenched grime it will be a challenge to address these priorities.

**2.02 SAMPLE CONTRACT:**

A sample Contract containing the statement of work and contractual terms and conditions is included at Exhibit A.

**3.0 PROPOSER QUALIFICATIONS**

OSU may award after the first stage evaluation to the highest ranked Proposer without moving on to the second stage evaluation. If OSU decides to move to a second stage evaluation, the highest ranked Proposers

from the first stage evaluation will move to the second stage evaluation. Proposers who are included in the second stage evaluation may be requested to provide additional information about their Proposal through interviews, presentations, requests for best and final Proposals or other methods relevant to the goods or services, in order for the evaluation committee to make a final determination. Points awarded in the first stage evaluation will not be carried to the second stage evaluation. Contract will be awarded to the Proposer who in OSU's opinion, best meets the requirements and qualifications of the IRFP and OSU's needs.

### **Scope of Work and Additional Terms/Conditions**

#### **1.01 Scope of Work**

Contractor will provide the following services:

- ✓ Make record photographs before and after treatment.
- ✓ Remove meridian ring and hour rings for cleaning, and to provide access to the sphere for repairs.
- ✓ Clean using proprietary solvent combinations (Nevr-Dull) and coat (Agateen).
- ✓ Add brass sleeve on central shaft to prevent the sphere from sitting too low in the meridian ring.
- ✓ Reduce or remove varnish from spheres and horizon rings with solvents as possible.
- ✓ Remove entrenched surface grime with vinyl erasers and methylcellulose surfactants as possible.
- ✓ Reduce staining from fluid damage as possible.
- ✓ Lift paper gores at areas of structural damage with steam to facilitate repair of the spheres.
- ✓ Lift the horizon ring to fill losses. It is possible that full removal may be necessary for reinforcement by lining and to facilitate secure overall remounting.
- ✓ Repair cracks and losses in the surface of the sphere by filling with plaster, sanding smooth and covering with Japanese paper using wheat starch paste.
- ✓ Fill areas of loss with paper similar to the original.
  - Option 1: Duplicate only the “hard lines of design (latitude, longitude, etc.) by printing, tone the paper to match background geography of land masses and oceans but without the outlines or typography duplicated. This strategy is recommended because much of the paper loss occurs where there is already marked abrasion of the design or little original design, because the area around the equator is loss of the design not the paper and it is largely hidden by the horizon ring, and because full design completion is appreciably more expensive and probably not called for in light of the other compromises to the general integrity of the design from abrasion, fading and grime in other locations.
  - Option 2: Reproduce areas of design loss from other another version of the same edition of the globe using high resolution digital images of the missing areas, printing of the black areas of delineation with hand coloring after mounting to match the surrounding paper.
- ✓ Readhere paper to the sphere or horizon ring using wheat starch paste with methylcellulose as a lubricant.
- ✓ Inpaint the original paper surface where the design was missing from abrasion or water damage using watercolor or the light brown extract of boiled paper (su-su), to minimize their distraction, to render the surface more uniform and make the surviving original design more legible.
- ✓ Burnish all paper surfaces, apply gelatin sizing, and varnish with a synthetic resin (e.g. Acryloid B-72 in xylene) to saturate, and to protect the surface from handling and the deposition of grime.
- ✓ Conserve stands
- ✓ Clean original clear finish, inpaint abrasions especially at feet, coat with a clear or pigmented wax and buff as necessary or pad lightly with shellac (toning optional). Assess need to resecure joints.
- ✓ Provide Treatment Report.
- ✓ Pack for return shipment as received.

The parties understand that as the project develops, related services not listed above may be required to achieve the parties' objectives. Any modifications to the Contract, including the Scope of Work, shall be made in writing and by mutual consent of the parties.

#### **1.02 Payment**

Invoices shall be paid in accordance with OSU's standard payment terms which are Net 30 days upon receipt of correct invoice.

### **1.03 Travel**
