1	Zeta Potential Measurement Instrumentation Requirements: <ul style="list-style-type: none"> • Must be able to handle both aqueous and organic solvents in volumes between 12 uL to 1.5 mL. • The system must include temperature control from 0 to 90°C • The instrument footprint is compact and has the option for an auto-sampler • The system must be able to measure zeta potential of molecules and particles over a dynamic size range (3.8-10 microns) and in low sample volumes (at least >20 uL). • The position of the sampling volume within the measurement cell is variable, with both automatic and manual control, to minimize signal interference and to enable sample measurements with minimal or no dilution. • The system should have the optional capability to measure molecular weight ranging from 1x10³ to 2x10⁷ with volumes as low as 12 uL • In additional to all the hardware, the software must be user friendly, customizable to each operator, possible to export all measured data and visualize it in the software (with ease). • The user has the ability to measure the sample with manually defined parameters, or by defining a 'Standard Operating Procedure (SOP) and trend plots for each measured parameter and overlay up to 20 sizes/zeta potential distributions 	1	EA
